

## PTFE lined spacers

### • Specification

- ❖ Solid PTFE or Lined spacers are available for connecting flanges at short distance.
- ❖ For lengths which are just a little too short to be a pipe spool we offer PTFE lined pipe with welded stub ends, this is effectively a pipe spool without flanges being manufactured from lined steel pipe with 2 off welded stub ends as used on a pipe spool with PTFE paste extruded liner flared each end.
- ❖ For spacers too short where we cannot weld 2 stub ends, we manufacture the steel from a solid billet machined to the correct length and then lined with PTFE extruded tube flared each end.
- ❖ For the shortest lengths of spacer we supply a solid ring of PTFE. Note that these do not have the support of a steel housing they can only safely be used for short lengths.
